PROFESSIONAL SUMMARY

Generative AI Developer with 2.5+ years building production multi-agent LLM systems for enterprise brokerage clients (UBS, Morgan Stanley, Jio, Fyers, JPMorgan). Deep expertise in RAG pipelines, agentic orchestration, and hallucination-prevention controls — deployed across 8+ live production environments using Python, FastAPI, LangChain/LangGraph, and vector databases.

TECHNICAL SKILLS

Languages	Python
Generative AI / NLP	LLMs, RAG, Prompt Engineering, LLM Fine-Tuning (LoRA/QLoRA), Transformers, NER, Summarization, Supervised Learning, Unsupervised Learning, Reinforcement Learning
AI Frameworks	LangChain, LangGraph, LangSmith, Hugging Face Transformers, PyTorch, TensorFlow, Scikit-learn
Backend & APIs	FastAPI, Flask, RESTful APIs, Microservices, Asynchronous Processing
Data & Vector Stores	PostgreSQL, MongoDB, Azure CosmosDB, FAISS, ChromaDB, Pinecone
Agentic Architectures	Multi-Agent Systems, ReAct, MCP, A2A Protocols, Agentic AI
DevOps / Cloud	Microsoft Azure, Azure AI Services, Docker, Kubernetes, Git, CI-oriented deployment
Data & Visualization	NumPy, Pandas, Matplotlib, Seaborn, Plotly

EXPERIENCE

Generative AI Developer <i>Coimbatore, India</i> <i>Product: Dolphin-AI 2.0</i>	KGiSL Technologies Pvt. Ltd. <i>Oct 2025 – Present</i>
--	--

Dolphin-AI 2.0 (Dolphin Dashboard) — AI-Driven Development & QA Automation Platform

- Architected an internal AI-driven DevOps/QA automation platform spanning 110 composable AI workflow skills across the full SDLC — planning, implementation, code review, testing, deployment — used to drive requirement and task development across 5 enterprise brokerage clients (UBS, Fyers, Jio, Morgan Stanley, Opera/MOAP).
- Built the filesystem-driven skill orchestration engine and a web-based operational dashboard for live workflow execution, terminal management, and real-time monitoring across multi-tenant QA infrastructure.

Technologies: TypeScript, Node.js, Express, Socket.IO, Kubernetes, Playwright, Claude AI

SCQA-Cycle — Autonomous Settlement Cycle QA Orchestrator

- Designed an autonomous orchestrator executing 25 sequential settlement actions end-to-end from a single input, run across multiple client environments (UBS, Fyers, Jio, Morgan Stanley) with checkpointed, resumable execution that removed manual operator intervention from multi-hour QA runs.

Technologies: Claude AI, PostgreSQL, Dolphin UI MCP, Markdown Spec Engine

SCQA-File-Simulate — Settlement Cycle Test Data Simulation Platform

- Built a transactional test-data simulation platform generating dynamic settlement-cycle data across 5 client environments (UBS, Fyers, Jio, Morgan Stanley, JPMorgan), with approval-gated database writes and pre-generated rollback scripts as safety controls.

Technologies: Python, PostgreSQL, Dolphin API MCP, Dolphin UI MCP

QA-Bot — AI-Assisted QA Issue Intake Platform

- Built a groundedness-validated intake platform that converts unstructured tester bug reports into structured, Jira-ready summaries, applying zero-inference constraints to prevent hallucinated content, deployed across 8+ enterprise brokerage environments.

Technologies: Python, FastAPI, PostgreSQL, Claude AI, Jira REST

Conversational API Discovery & Market Intelligence — chat interface within Dolphin-AI 2.0

- Built a conversational chat interface integrated into Dolphin-AI 2.0 that lets users query and discover REST APIs in natural language, using RAG over vector-embedded Swagger/OpenAPI endpoints indexed in Pinecone for semantic routing and parameter extraction.
- Extended the interface with real-time NIFTY 50 and individual-stock market intelligence and voice-driven query support (FFmpeg), turning it into a combined API-discovery and market-data assistant.

Technologies: Python, FastAPI, Gemini, Pinecone, RAG, Swagger/OpenAPI, YAML, yfinance, FFmpeg

Generative AI Developer

Coimbatore, India

Product: GrowflexAI

Yectra Technologies

Apr 2024 – Sep 2025

AI Analytics Platform — Conversational Data Interface

- Developed a production RAG chatbot enabling natural language queries across multiple datasets using hybrid FAISS retrieval, achieving 85% answer relevance across 200+ test queries with 5+ turn context retention.

Technologies: Python, FastAPI, LangChain, FAISS, OpenAI GPT-4, sentence-transformers

Natural Language to MongoDB Query Engine

- Built an NL-to-MongoDB converter enabling non-technical users to self-serve data insights, reducing data-team ticket volume by 40+ requests/week at 75% query accuracy across 100K+ document collections.

Technologies: LangChain, OpenAI API, MongoDB, Python, JSON Schema Validation

Dynamic Visualization System (Multi-Agent Architecture)

- Developed a LangGraph multi-agent system for automatic chart generation from natural language, supporting 10+ chart types and improving user adoption by 60%.

Technologies: LangGraph, OpenAI API, Plotly, Python, Multi-agent Systems

Domain-Specific Chatbot (ROOS — Cloud Kitchen Assistant)

- Fine-tuned an open-source LLM (LoRA/QLoRA) for a cloud-kitchen domain chatbot, cutting GPU training time 50% and deploying to production with sub-2-second response time on 200+ daily queries.

Technologies: Hugging Face Transformers, LoRA/QLoRA, CUDA, FastAPI, Model Deployment

EDUCATION

B.Tech in Information Technology

Dr. N.G.P Institute of Technology — CGPA: 8.74

2020 – 2024
